Abstract (en)
[origin: EP0231498A2] 1. A fitting for an at least tiltable leaf (2) of a window, a door or the like, the top end of the leaf being connected to a rigid frame or the like via two lateral spaced-apart stays (12, 13) which are mounted to be at least rotatable at both ends, the two stays being coupled to each other by a link (28), characterised in that the link (28) connects the two leaf-side ends of the stays (12, 13) to each other and in that, at a distance from the leaf-side axes of rotation (14, 16) of the stays it is at both ends articulately rotatable on the stays, its pivot pins (26, 27) extending parallel with the pivot pins (14, 16) of the stays (12, 13).
