Abstract (en)
[origin: EP0231724A1] 1. A structure of prefabricated construction elements (1) of the same kind which are stacked to form a space lattice and which interlock transversely with respect to the stacking direction, said elements (1) having flat supporting surfaces and holes (2) in which connecting plugs (8) engage and between which disks (7) are inserted, said disks (7) consisting of a softer material than that of the construction elements, characterized in that connecting elements (6) in one piece, comprising a disk (7) and a plug (8) are provided, the plugs (8) of which extend in the holes (2) of the construction elements (1) with some clearance, and in that spacing elements (3) of the same thickness as the construction elements and having flat supporting surfaces are provided which are interposed between construction elements (1) at the intersections of the space lattice.
