Abstract (en)
[origin: EP0232484A2] 1. A ski having a ski body comprising a core (3a, 3b, 3c), an upper ply (1) and a lower ply (2a, 2b), wherein the core comprises at least three juxtaposed core portions (3a, 3b, 3c) which are unconnected to each other at the sides and which extend substantially in the longitudinal direction of the ski, and the core material (4) of the two outer core portions (3a, 3c) which extend as far as the side surfaces of the ski extends as far as the top sides and undersides of said core portions (3a, 3c), characterised in that the inward sides of the two outer core portions (3a, 3c), which inward sides face towards the inner core portion or portions (3b), are formed by bars (6) which are disposed substantially normal to the running surface (9) and which comprise a material which is different relative to the core materials (4) of the outer core portions (3a, 3c) and which is laterally connected, preferably by adhesive, to the core material (4) of the respective outer core portions (3a and 3c respectively).
