Abstract (en)
[origin: EP0232842A1] With the method, constructions of elements made from modular elements (1, 2) are erected, which have tensioning members (32, 118, 48, 119) passing through them in the pre-assembled state. The modular elements (1, 2) with the tensioning members (32, 118, 48, 119) are inserted into the respective final installation position and braced with the coupling pieces (126). Tensile and/or shrinkage forces which arise are transmitted exclusively via the tensioning members (32, 118, 48, 119). At least one of the modular elements can be inserted into an opening, the dimensions of which correspond, seen in the direction of insertion, to the dimensions of this modular element. <IMAGE>
