Abstract (en)
A loading shovel (14) of a front loader (4) is pivotably connected to a loading beam (10) via a four-bar mechanism (20). A guide link (28) and a loading-shovel link (24) are substantially larger than the loading-beam link (22) in order to increase the working cycles of the loading shovel (14) with as little expenditure of force as possible and thus with a small hydraulic cylinder (16). <IMAGE>

Abstract (de)
Eine Ladeschaufel (14) eines Frontloaders (4) ist über eine Vier-Gelenkeinrichtung (20) an eine Ladeschwinge (10) schwenkbar angeschlossen. Ein Führungslenker (28) und ein Ladeschaufellenker (24) sind wesentlich größer als der Ladeschwingenlenker (22), um mit einem möglichst kleinen Kraftaufwand und somit kleinem Hydraulikzylinder (16) die Arbeitszyklen der Ladeschaufel (14) zu erhöhen.
