Abstract (en)

[origin: WO8704777A1] The cold-storage bar (1), which has a shallow depth can be fixed to a wall at head-height, thus improving its overall visibility and use of the contents. The reduction of depth is obtained firstly by arranging the non-cooled components (10) behind the non-cooled compartment (3), arranged at the side of the cooled compartment (2) of the bar. In addition, the evaporator (11) is placed inside the insulation (4) of the cooled compartment (2).
