Abstract (en)  
[origin: EP0233465A1] 1. A device for light fittings inset in the panels (2) of a suspended ceiling, comprising a cylindrical housing bowl (1) provided with a bottom flange which abuts the panels (2) of the ceiling and is held by means of springs (4) provided with arms (5) bearing against the upper surface of the said panels (2), characterised in that within this bowl slides a light fitting support (6), which support has its outer wall provided with two grooves (7) which alternately accommodate a toroidal joint (8) depending on the position of the said support (6) in the bowl (1), the said toroidal joint allowing the said support to be immobilised on the bowl, which support (6) has on its inside an abutment (17) in its upper part against which bears the base of the light fitting (11) with its socket (12) and a socket cap (13), which support (9) is provided in its upper part with hooks (16) allowing the said support to be held integrally with the light fitting, and has its base formed by an outer flange (8) which is a grasping means for withdrawing downwardly the removable assembly of the light fitting and support and the said flange (9) can also carry elements (20) supporting a filter (24) or shades (25).
