Abstract (en)

[origin: US4725011A] A supply magazine for insertion in an arrangement for removing individual sheet films, for example X-ray sheet films, arranged in a stack in a light-tight wrapping, comprises a cover, a box which is at least partially open and is closable by the cover, and being formed for accommodating a stack located in a wrapping, a winding device provided with a winding shaft which is driven from outside and formed for suspending and winding a winding flap of the wrapping together with the latter after closing of the box, and an indicating device including a movable sensing member which abuts with spring biasing against the winding shaft in the region of the winding flap, an observation opening formed in a part of the box which supports the winding shaft and arranged so that the sensing member is visible through the observation window, and a light sealing provided between the winding shaft and the observation window.
