Abstract (en)
[origin: EP0233553A2] 1. Roller flattening machine having a flattening section along which the flattening rolls are disposed mutually staggered both above and below, and in which the rolls above the flattening section (3, 4) are fastened in an upper, and those below (5, 6) in a lower roll frame, of which at least one is adjustable, wherein the last aligning roll (6), viewed in the transport direction, is fastened displaced outwardly with respect to the common inner tangential plane (12) defined by the other flattening rolls (5) of the same roll frame (2).
