Abstract (en)

The invention relates to a glazing member 1 which is a unitary non-inflammable moulded resin member which with an identical one 1a is used to hold a pane of glass 2 in an aperture in a door 3, the members 1 and 1a being held in position by nails 6. There is a flexible resin edge member 5 which is formed from an identical resin to that of the members 1, 1a but with the addition of an additive such as a flexiliser to render the resin flexible. The members 1, 1a, pane 2 and door 3 form a fire containing system.
