Abstract (en)

[origin: EP0234079A2] A carton blank for making a tubular carton which includes an additional panel (64) joined to one of the body panels or one of the end panels by a break line (62), such that upon erection of the carton from the blank the additional panel detaches at the break line from the panel to which it was joined, and is adhesively secured to an outer surface of another of the body panels. Preferably the adhesive (72) is that known as "high-tack" so that the label can be peeled from the said another of the body panels and re-affixed e.g. to a prescription or other commodity listing.
