Abstract (en)

1. Process for spinning pure or blended flax, designed for the textile industry to form a yarn by twisting flax fibres from bundles of long fibres swingled and agglomerated by pectins, implementing at least one spinning frame, characterized in that : - the length of the fibres is mechanically reduced by a suitable treatment, followed by another mechanical operation so as to obtain only short, extremely fine fibres, - the short fibres are carded to form a ribbon, - the ribbon is drawn to adjust its weight per unit length and the said short fibres are controlled while they are being drawn on the spinning frame, - the ribbon is twisted to form a roving, - the roving is wetted, - the wetted roving is drawn and is twisted to form the yarn.

Abstract (fr)

L'invention est relative à un procédé de filage du lin pur ou en mélange. Selon l'invention, les fibres longues de lin teillées sont raccourcies et affinées. Les fibres courtes écruées obtenues sont ensuite cardées et étirées puis transformées en mèches. La mèche est ensuite filée au mouillé à l'eau froide sur un métier à filer pourvu d'un train d'étirage (2) à manchon (5). L'invention trouvera tout particulièrement son application dans l'industrie textile.
