Abstract (en)
[origin: WO8704364A1] A device for supporting toy car racetracks above mounting surfaces, especially racetracks formed of racetrack members linked together and having a usable middle section limited on its sides by prismatic conductors, comprises for supporting the racetrack sections at any desired height an arrangement of pillars (2, 19) that can be inserted into a base plate (1, 15) and are formed of pillar sections (2', 19') axially mounted one on top of the other in a detachable way. Brackets (5) can be inserted in perforations (3, 22) formed in the pillar sections or symmetrically supported on the free end of the pillars (2, 19) by sockets. Guides are formed on the top side of the brackets (5) for securing the racetrack members (6) on the brackets.
