Abstract (en)

[origin: EP0234652A1] This invention relates to an installation adaptable to an equipment for washing de refuse bodies (21), the object of which is to solve the problem of transferring the washing water from the washing chamber (13) to the water collector reservoir (6). This problem is solved by creating, in the central compartment of the reservoir (6), a vacuum such as to suck the washing water through a pipe (12) which draws in the washing chamber (13) and debouches into the said central portion (6) of the reservoir; the flow is controlled by a spheric gate valve (11) mounted on the pipe. The installation is completed by all the contrivances which render it safe and of easy maintenance.
