Abstract (en)

[origin: US4784415A] A device for locking and unlocking any member, comprising a bolt slidably mounted within a body and having a rear part and a front part to co-operate with a notch provided in said member in which a first electromagnet operates with its core in the bolt, the rear part of which may co-operate with the core of a second electromagnet to hold the bolt against motion within the body in a locked position on the member or in an unlocked position.
