Abstract (en)
[origin: EP0235484A1] The invention belongs to the technical sector comprising bandages and similar means of treatment. The belt is noteworthy in that at least its rear portion, extending as far as the sides, is made of a transversely and longitudinally elastic material, while its dorsal portion (1a) possesses, on its front face, catching means (4) capable of interacting with complementary means (9) carried by at least one removable pad (5) which is composed of a cushion made of compressible and elastic material and which can, by being shifted transversely, longitudinally or obliquely, be arranged in any area of the catching means (4) of the belt, so as to coincide, after the belt has been placed in position, with the painful area of the back and to exert on this area, and by its apex, a constant and localised moderate pressure. The invention is used mainly in the treatment of lumbar pain. <IMAGE>
