Abstract (en)

Method and device (1) for making an object such as a bicycle tyre (10) light retro-reflecting over a required part surface, said method comprising the binding of a material containing at least glass beading to said object with an adhesive agent. The method consists of removal of a thin surface layer from said required part surface, application of a quick drying liquid adhesive agent to this surface, sprinkling of the adhesive agent directly thereafter with a slight excess of a powder material containing at least glass beading and a light coloured filler in powder form, and by removal of the excess powder material. Said device comprises a frame (2), a removal device (18) connected to said frame for removing a thin surface layer from said object, an adhesive agent feeding device (30) for applying adhesive agent from an adhesive agent reservoir to said object, and a sprinkling device (32) for sprinkling onto said adhesive agent a powder material containing glass beading and a light coloured filler in powder form.
