Abstract (en)
[origin: WO8701676A1] A plastic crate for bottles composed of several parts, in particular two parts, comprising a partition parallel to the outer wall. The parts of the crate are limited by auxiliary walls having locking pieces which positively engage with a vertically-moving locking slide (18) free to move vertically, engaged by the ends (211) of a suspension support mounted pivotally on the parts of the crate, and which project beyond their point of articulation with the parts of the crate, entering the recesses (186) of the locking slide provided for this purpose. A spring loaded clipping device for example (211, 1911) enables the end (211) of the suspension support to clip into the recess (186) when it is made to pivot against the force exerted by the spring up to its vertical locking position, the slide (18) having already been moved from its unlocking position to its locking position.
