Abstract (en)
[origin: EP0236514A1] 1. A transport and storage crate made of synthetic resin material comprising a floor and four walls which is provided at its upper and/or lower edge with means for slip-free stacking, characterised in that the front wall (4) and/or the rear wall is designed to be double-walled in its lower region, and in its upper region is open and can be closed by a displaceable wall component (7), that this front wall (4) has two lateral guide rails (8) for the displaceable wall component (7) which extend into the interspace (5) of the double wall (4A, 4B), that the displaceable wall component (7) is provided with at least one projection (9) which, serving as a limiting stop, engages behind an angled portion of a part of the double wall (4A, 4B), and that the displaceable wall component (7) is provided with at least one resiliently arranged boss (17) which engages into at least one catch opening (16).
