Abstract (en)

[origin: US4945023A] A light-sensitive material comprising a light-sensitive layer which contains silver halide grains, a reducing agent and a polymerizable compound provided on a support, characterized in that the silver halide grains have such a grain size distribution that the coefficient of variation (σ / \bar{r}) is not more than 20% wherein σ means a standard deviation of the grain size and \bar{r} means an average grain size. Image-forming methods employing the light-sensitive material are also disclosed.
