Abstract (en)
[origin: EP0237392A1] Transmission centres comprising transmitters combined with antennas dispersed over a given terrain and operating, for example, with decametric waves. The transmission centre comprises a building (Bj) comprising the necessary energy sources, a central building (B) intended to manage the operating of the transmission centre, and transmission units (Ue1, Ue2) distributed over the terrain. These transmission units, all of which are similar, each comprise a rotary antenna (A1, A2) at the foot of which is arranged a housing (b1, b2) sheltering a transmitter (E1, E2) combined with the antenna. Application, in particular, to centres for decametric wave transmission. <IMAGE>
