Abstract (en)
[origin: WO8701712A1] Encapsulating compositions are prepared from reinforced polyaromatic cyanates compositions comprising (A) one or more polyaromatic cyanates at least one of which is a hydrocarbon polyaromatic cyanate resin such as a phenol-dicyclopentadiene novolac polycyanate and (B) one or more curing agents such as cobalt naphthenate. These compositions are particularly suitable for use in electrical applications such as the encapsulation and subsequent protection of electrical and micro electronic devices and circuitry.
