Abstract (en)
[origin: EP0237600A1] In order to achieve very short damping periods of the actuating member (1), the backstop (3) is formed of elastic material having a basin-shaped depression (3-1) facing the actuating member, the lateral face (3-2) of which depression (3-1) completely or partially rests against the actuating member when this is in the rest position. <IMAGE>
