Abstract (en)

[origin: EP0237669A1] An image recording method comprises the steps of heating a sublimable dye (20) to produce a dye vapor (23), jetting the dye vapor from a nozzle (24) toward a recording member (17), and attaching the dye vapor to the recording member to form a picture image thereon. The invention resides in the provision of a gas stream (32) transverse of the stream of the dye vapor jetted from the nozzle (24); the dye vapor (23) or fine particles of the sublimable dye (20) formed on cooling being removed from the vicinity of the recording member (17) by means of said gas stream.
