Abstract (en)
[origin: EP0237885A2] The invention relates to an apparatus junction box which can be connected to identical apparatus junction boxes on all sides. The tension relief of the conductor cables is carried out directly in the connection to the end walls. In its regions, retaining slots are formed which are made up from the cover and the lower part of the housing. Sealing blocks provided with holding webs and having cable ducts are inserted in the retaining slots of the apparatus junction box and are used as connecting elements to the adjacent apparatus junction box.
