Abstract (en)  
[origin: EP0238052A2] The invention relates to an elastic, profiled strand for the formation of cable strands. In this arrangement, cavities are formed inside the strand, into which can be inserted at least one means of retention and at least one electrical control cable. Externally, the strand is surrounded by one or more connecting cables, a binding surrounding the entirety ensuring the integrity of the cable strand. <IMAGE>
