Abstract (en)  
[origin: EP0238072A2] The pallet made of folding material is used for receiving and displaying layers of goods situated one above the other and has tray-shaped receptacles for the goods which leave the inserted goods free at the front (4) and at the side walls (3) of the receptacles at least in their upper part. Furthermore, the pallet has in each case at least two receptacles arranged adjacently to form a group, the adjacently arranged groups of receptacles being enclosed at the sides and at the rear in each case by a U-shaped part and a collection tray being provided with a peripheral edge (9) on its top side, into which the receptacles of the upper layer in each case can be inserted. <IMAGE>
