Abstract (en)

[origin: US4736846A] This one-piece packaging is made from a blank of foldable material and includes a top wall whose width is less than the width of the bottom wall, and is not greater than half the maximum transverse dimension of the articles. This width may, in the limit, be zero. As a result: at least a portion of the height of the front wall is sloping; the windows cut out in the front wall which have bottom portions that are narrower than the maximum transverse dimension of the bottom regions of the articles in order to retain the articles in the packaging also have top portions whose width is equal to the maximum transverse dimension of the top regions of the articles so that said top regions of the articles project as much as possible from said packaging; and the side end faces of the packaging which are optionally closed by walls are at least partially trapezoidal, and in said limit are at least partially triangular when said top wall is of zero width.
