Abstract (en)

The reticular structure is made up of sectional elements. The straight reticular modular elements have three longitudinal structural shapes arranged in a triangular configuration and having reticular connections (3) on two of the interspaces between the shapes. This allows a piling-up of more elements, one inside the other. The shapes have slightly projecting ends. Sleeves (5) connect abutting ends of the shapes, belonging to adjacent elements, by a clamp. A crosspiece (9) with sleeves engages the ends of the shapes placed on the side without reticular connections. Auxiliary components (36), are applied to the ends of the shapes and supplied with appendices (37,44,49,72), corresponding to the ends, for connection through the sleeves.
