Abstract (en)  
[origin: EP0239320A2] The response to low temperature flow improvers to a distillate fuel containing between 4 and 10 wt % wax at 10 DEG C below cloud point and containing substantially no paraffins longer than n-triacontane, is enhanced by the addition of n-alkanes to provide C24 and higher alkanes in an amount greater than 0.35 wt.% of the fuel.
