Abstract (en)
[origin: EP0239854A1] To obtain a flat outflow on both sides from an air outlet (1) arranged in the slot space between two ceiling covering panels (33', 34'), an air guide element (44), which is held rotatably between the side walls (3, 4) of the outlet channel (2), has a T-shaped hollow cross-section which is provided for the transverse throughflow and which forms an inward flow part channel (55) and two oppositely directed outward flow part channels (56, 57). <IMAGE>
