Abstract (en)

[origin: EP0240382A2] Articulated folding framework of a reclining chair, comprising a small frame (1, 2) and a large frame (3, 4) placed so as to cross one another and intended to form the legs of the chair and to support the seat, the spacing of these two frames being limited on each side by an upper articulated connection which joins the two frames above their point of intersection (A), and by a lower articulated connection which joins the two frames below their point of intersection (A), characterised in that the upper connection has a point of articulation (5) with the small frame (1, 2) which is located above the small frame and which is joined to the said small frame by a rigid link (5, 7). <IMAGE>
