Abstract (en)
[origin: WO8701752A1] A tile fixing system wherein the upper (6) of two overlapping tiles is provided with a locking channel in the form of a channel member (7) partly embedded in the under side of the upper tile (6). The locking channel is adapted to engage the head of a tile fastening element, such as a nail (9), which secures the lower tile (6) to a tiling batten (8). By means of this system the tiles may be secured both to the tiling battens and each other.
