Abstract (en)
[origin: EP0241587A1] 1. Lock cylinder comprising closure means for sealing the outer end of the key passage which is located in the core of the cylinder, characterised in that mounted in the cylinder core (3) is a single cylindrical roller (12) adapted for displacement in respect of the key passage (9) obliquely to the cylinder axis, the diameter (D) thereof being greater than the width (B) of the key passage (9), and in that a spring (13) bears directly on the roller (12) by which the roller (12) can be pressed into a position which closes off the key passage (19).
