Abstract (en)

[origin: US4844301A] A dispenser consisting of a cylindrical container made up of a molded plastic material, having a through-bore, a piston reciprocable in the container and defining two chambers respectively containing a product, such as tooth-paste, and a propellant gas, such as compressed air, and a valve having a valve body integral with the body of the container, so as to allow a user to extract a given quantity of product through the through-bore, as his needs arise. The valve comprises a needle moving in an opening extending transversely horizontally of the valve body. Its control member is an elbowed lever arm mounted in a cavity in the valve body on the opposite side of the through-bore.
