Abstract (en)

[origin: EP0241762A2] In order to simplify mounting in a mounting ring (10) that can be clamped in an opening (21) of the suspension ceiling, the device has a plurality of segments which delimit an annular opening and are made of elastomeric material. These segments (16) are mounted in the mounting ring and can be pressed together by means of clamping parts (17) which can be operated from below, so that the inside diameter of the segments (16) is reduced by the process of being pressed together. The light fixture (12) is held firm in this way. <IMAGE>
