Abstract (en)

This invention relates to a plate for connecting bone splinters with bone shafts. The plate has a shorter shaft arm (1) and a longer shaft arm (2) situated perpendicularly to each other. In the shaft arm (1) there are two tapered oval pressure holes (3) of identical direction as that of the axis (0) of the longitudinal longer shaft arm ((2)). In the same axis, in which each oval tapered pressure hole (3) is situated, in the bottom portion of the shorter shaft arm (1), there are oval tapered pressure holes (5). In the bottom portion of the longer shaft arm (2), in its longitudinal axis (0), there runs a groove (6).
