Abstract (en)

[origin: EP0242437A2] The present invention relates to a method for adjusting the penetration range of a height-adjustable ski track grooming tool attached to an automotive ski track vehicle, and an associated ski track vehicle. To adapt the penetration range of the ski track grooming tool to the changed driving conditions during uphill or downhill driving, the ski track grooming tool is automatically raised in dependence on the power requirement of the vehicle drive when the power requirement of the drive increases and is automatically lowered deeper when the power requirement of the drive drops. <IMAGE>
