Abstract (en)

The method comprises applying a vaporised metallic film (c), e.g. aluminium, which is adherent to a first substrate (12) to a second substrate (1) bearing a design or representation (a) selectively coated with a hardenable or curable bonding agent (b) in such a manner that the film (c) contacts the coated design or representation (a) and allowing the bonding agent (b) to harden or cure. Thereafter the film (c) together with the substrate (12) is stripped from the coated substrate (19) whereby the said design or representation is stamped out of the film (c) whereas the stamped out portion or portions of the film (c) remain adherent to the coated design or representation.
