Abstract (en)

[origin: EP0242514A1] Loading installation for a winning element (5), in particular a loading member (5) which is designed as a screw conveyor and if need be at the same time forms the winning element and interacts with a guide element (6). The loading installation (5) is arranged transversely in front of an appliance (1), preferably movable on caterpillar tracks (2), in such a way that a fork (8) is provided which is pivotable in the transverse direction about an axle journal (13) displaced in the centre axis of the appliance. The loading installation together with guide element is rotatably mounted about a horizontal axis which extends in the area between the free fork arms. <IMAGE>
