Abstract (en)  
[origin: EP0242819A2] In order to be able to bend and mount roof-gutter supports (T) on the roof in accordance with the pitch of the roof, a frame (12) is placed on the double lathing (D) at the roof end and the next roof lath (L), which frame possesses a holding device (18) having a channel (30) open on one side, into which the roof-gutter support (T) is inserted from below and in which it is guided. The frame (12) is clamped to the roof by means of a clamping device (40). By turning a pivoted lever (32), the roof-gutter support (T) is bent onto the double lathing (D) and nailed thereto.
