Abstract (en)

[origin: EP0243100A2] Disclosed is a color developing solution for processing a light-sensitive silver halide color photographic material, which comprises the compound represented by General Formula (I) shown below and at least one selected from the group consisting of the compounds represented by General Formula (II) and (III) shown below: General Formula (I) <CHEM> wherein R1 and R2 each represent an alkyl group having 1 to 3 carbon atoms, General Formula (II) <CHEM> General Formula (III) <CHEM> wherein, in Formulas (II) and (III), R1, R2, R3, R4, R9 and R10 each represent a hydrogen atom, a halogen atom, a sulfonic acid group, an alkyl group having 1 to 7 carbon atoms, -OR5, -COOR6, <CHEM> wherein R5, R6, R7 and R8 each represent a hydrogen atom or an alkyl group having 1 to 18 carbon atoms. This invention can provide a color developing solution for a processing light-sensitive silver halide color photographic material and a method employing the same being excellent in photographic performance for fog and maximum density.
