Abstract (en)

[origin: WO8702808A1] An apparatus with cassette for valuable documents and comprising a chamber provided with a support plate (21) displaceably arranged in the chamber. The cassette is arranged for the automatic infeed of documents into the chamber, and the support plate is arranged to co-act with a feed spindle (23) extending along the cassette for automatic displacement of the plate in a given direction in accordance with the number of documents fed into the chamber. The invention is characterized by a compacting device for detecting the actual level of the documents in the cassette and a drive motor (25) in driving connection with said spindle (23), said compacting device being arranged to produce a control signal to the motor (25) in dependence on the level detected.
