Abstract (en)
[origin: EP0243642A2] 1. A sanitary mounting frame (1) for in front of the wall installation for the reception of inlet and outlet pipings as well as fastening elements of sanitary devices and for the affixing of fairing elements, in which respect the frame has vertical side parts (1.1; 1.2) which are designed as profile elements and which are connected together by a lower horizontal transverse strut (1.4; 6), and the upper ends of which are fastenable to a retaining rail (2), fastenable to a stationary wall and having a substantially U-shaped cross-section, in such a way that a lateral displacement of the frame (1) is possible, which is moreover supported on the floor by means of floor supporting elements (7), characterised in that the upper ends of the two vertical side parts (1.1, 1.2) are connected together by an angle profile piece (3), present on the rear of the frame (1) and having a downwardly pointing limb (3.1), which is insertable from above into the retaining rail (2) fastened to the wall (W) with upwardly pointing limbs (2.1, 2.2) and is fixable inside the retaining rail (3) in various positions in a manner allowing a tilting of the frame (1) in the direction perpendicular to the wall (W), and in that the floor support elements (7) are arranged on the front side of the frame (1) and are so designed that the distance of the frame (1) from the floor (B) is adjustable.
