Abstract (en)

[origin: EP0243870A2] The device is for the heat treatment of running webs of woven or knitted material or the like which are led over guide rollers around the circumferential surfaces of heatable rolls or cylinders and is aimed at making it possible to adapt the heat supply from the surfaces of the rolls or cylinders to the web of material quickly to suit different requirements. The invention proposes arranging the guide rollers, which are disposed in front of and behind every heatable roll or cylinder, around the circumferential surfaces of the rolls or cylinders in such a way that they can swivel into different positions and assigning to the swivelling guide rollers length compensating devices for the web of material. <IMAGE>
