Abstract (en)
[origin: EP0244395A2] The sealing according to the invention is intended for sealing the arris and/or ridge regions of roofs provided with roof-covering elements such as clay roof tiles, concrete roof tiles or fibrated concrete slabs. The sealing consists of an essentially two-legged sealing profile (1), of which one sealing leg (2) bears against the arris (8) or ridge lath and the other sealing leg (3) bears against the end faces of the roof-covering elements (6). The two sealing legs (2, 3) are braced relative to one another by a further sealing part (5). <IMAGE>
