Abstract (en)

A connector assembly (10) and an installation method therefor provides a fluid-tight joint between a nozzle (16) and a column (30) concentrically supported within the nozzle. An annular seal assembly (34, 36, 38) is disposed above a flange (18) formed on the interior of the nozzle. A spacer sleeve (50) is threaded to the nozzle for engagement with a ledge (54) formed on the column. A clamp assembly (62, 64, 38) is mounted to the column at a fixed position and includes means for raising the column in relation to the nozzle to fix the axial position of the column. A nut (60) threaded to the column is rotatable for forcing a drive sleeve (40) into compressive engagement with the seal assembly (34, 36, 38) to produce a fluid-tight seal between the column and the nozzle.
