Abstract (en)

[origin: EP0245218A2] The description relates to a plasmid vector for expression in Bacillus and used for cloning the structural gene which codes for the human growth hormone, a recombinant DNA molecule comprising the plasmid vector and the structural gene of the human growth hormone and a method of preparing the hormone comprising inserting the recombinant DNA molecule into strains of Bacillus and cultivating the resulting transformed strains in a suitable culture environment and recovering the thus-synthesized hormone from the cells.
