Abstract (en)

A method for packaging paper products and printed matter, such as envelopes, from a production line into packaging boxes. At present, slow and difficult manual packaging methods are used. The present invention solves the problem by using a method by which the products are grouped into bundles of a desired size by means of a special bundling device (4), from which the bundles are transferred into boxes by means of a packaging device (5) moving between the bundling device and the box.
