Abstract (en)

[origin: EP0245602A2] The work pieces are exposed to an air stream to which granulated material is added. To deburr parts having the most stringent purity requirements, provision is made for the work pieces (2), after the blasting operation by means of air and granulated material, to be blasted in a further step of the method by means of a liquid under high pressure, which liquid in particular consists at least partly of water. <IMAGE>
